Ancient labyrinth

Scatter letters or numbers along the correct path of the maze, so that when participants solve it, they will collect all the correct letters along the way. When the letters found are connected, a word or code is obtained, which leads to the next clue in the game.

💡 Tip: To make it more difficult and more interesting, you can also scatter confusing letters along the wrong paths in the maze - this way the players will have to distinguish between the real path and "traps".
